

GROUP 4 HERBICIDE

AGRICULTURAL HERBICIDE

For weed control in corn, cotton (except California), sorghum, small grains, pasture, hay, rangeland, general farmstead (non-cropland), rights-of-way, public utility and industrial areas, fallow, sugarcane, asparagus, turf, and grass seed crops.

ACTIVE INGREDIENT:

Dimethylamine salt of dicamba (3,6-dichloro-*p*-anisic acid)* 48.2%

OTHER INGREDIENTS: 51.8%

TOTAL: 100.0%

*This product contains 40.0% 3,6-dichloro-*p*-anisic acid (dicamba) or 4 pounds acid equivalent per gallon.

**KEEP OUT OF REACH OF CHILDREN
CAUTION/PRECAUCIÓN**

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.
(If you do not understand the label, find someone to explain it to you in detail).

FIRST AID	
If swallowed:	<ul style="list-style-type: none">• Call a poison control center or doctor immediately for treatment advice.• Have person sip a glass of water if able to swallow.• Do not induce vomiting unless told to do so by a poison control center or doctor.• Do not give anything by mouth to an unconscious person.
If in eyes:	<ul style="list-style-type: none">• Hold eye open and rinse slowly and gently with water for 15-20 minutes.• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.• Call a poison control center or doctor for treatment advice.
If on skin or clothing:	<ul style="list-style-type: none">• Take off contaminated clothing.• Rinse skin immediately with plenty of water for 15-20 minutes.• Call a poison control center or doctor for treatment advice.
If inhaled:	<ul style="list-style-type: none">• Remove person to fresh air.• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.• Call a poison control center or doctor for further treatment advice.
HOT LINE NUMBER	
Have the product container or label with you when calling a poison control center or doctor, or going for treatment. For chemical emergency assistance with a spill, fire, accident or exposure call CHEMTREC – Day or Night: 1-800-424-9300. You may also contact the National Poison Control Center, at 1-800-222-1222, day or night, for emergency medical treatment information.	

See inside of booklet for additional Precautionary Statements, Directions for Use, and Storage and Disposal instructions.

For product information or assistance in using this product, call 1-800-613-0427.

EPA Reg. No. 87895-5-80967

EPA Est. No.

Manufactured For:
MEY Corporation
121 S. Estes Drive, Suite 101
Chapel Hill, NC 27514

NET CONTENTS:

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Harmful if swallowed. Harmful if absorbed through skin. Avoid contact with skin, eyes, or clothing. Wear long-sleeved shirt and long pants, socks, shoes and waterproof gloves.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Some materials that are chemical-resistant to this product are butyl rubber and nitrile rubber.

All mixers, loaders, and applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Shoes plus socks
- Chemical-resistant gloves (except for applicators using groundboom equipment, pilots and flaggers) (e.g. barrier laminate, butyl rubber ≥14 mils, nitrile rubber ≥14 mils, neoprene rubber ≥14 mils, natural rubber ≥14 mils, polyethylene, polyvinyl chloride (PVC) ≥14 mils, or Viton® ≥14 mils)
- Protective eyewear

See engineering controls for additional requirements and exceptions.

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS STATEMENTS

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d) (4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

Pilots must use cockpits in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 170.240 (d) (4-6)).

User Safety Recommendations

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters or rinsate. Apply this product only as directed on label.

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

For any requirements specific to your State or tribe, consult the Agency responsible for pesticide regulation.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- Coveralls worn over short-sleeve shirt and short pants
- Chemical-resistant footwear plus socks
- Chemical-resistant gloves made of any waterproof material
- Chemical-resistant headgear for overhead exposure
- Protective eyewear

Notify workers of the application by warning them orally and by posting warning signs at entrances to treated areas.

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, nurseries, or greenhouses.

Do not enter or allow others to enter the treated area until sprays have dried.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

PESTICIDE STORAGE: Store product in original container only. Do not contaminate water, other pesticides, fertilizer, food or feed in storage. Store in a well-ventilated area.

PESTICIDE DISPOSAL: Pesticide spray mixture or rinsate that cannot be used or chemically reprocessed should be disposed of in a landfill approved for pesticides. Improper disposal of excess pesticide spray mixture or rinsate is a violation of Federal law. If these wastes cannot be disposed of by the use according to label instructions, contact your State Pesticide or Environmental Control Agency or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER HANDLING:

Nonrefillable Container (five gallons or less): Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available or reconditioning if appropriate or puncture and dispose of in a sanitary landfill or by incineration.

(continued)

STORAGE AND DISPOSAL *(continued)*

Nonrefillable Container (greater than five gallons): Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Then offer for recycling if available or reconditioning if appropriate or puncture and dispose of in a sanitary landfill or by incineration.

Refillable container: Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller.

To clean the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 10 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinsate into application equipment or rinsate collection system. Repeat this rinsing procedure two more times. Then offer for recycling if available or reconditioning if appropriate or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures approved by state and local authorities.

Before applying this product read all directions and precautions appearing on the container label and in this booklet. Failure to follow all directions, restrictions, and precautions may result in unsatisfactory weed control, crop injury, or illegal residues.

The following directions apply to all uses of this product. Additional precautions and restrictions will be found in each specific use section.

RESTRICTIONS

DO NOT treat irrigation ditches or water used for crop irrigation or domestic uses.

DO NOT apply this product through any type of irrigation system.

MIXING AND APPLICATION

UNLESS OTHERWISE SPECIFIED UNDER THE INDIVIDUAL USE HEADINGS OF THIS BOOKLET, THE FOLLOWING DIRECTIONS APPLY TO ALL CROP AND NON-CROP USES OF THIS PRODUCT. REFER TO INDIVIDUAL USE SECTIONS FOR ADDITIONAL PRECAUTIONS, RESTRICTIONS, APPLICATION RATES, AND TIMINGS.

This product is a water-soluble formulation that can be applied using water or sprayable fluid fertilizer as the carrier. If a fluid fertilizer is to be used, a compatibility test (see COMPATIBILITY TEST) should be made prior to tank mixing.

Ground or aerial application equipment which will give good spray coverage of weed foliage should be used. HOWEVER, DO NOT USE AERIAL APPLICATION EQUIPMENT IF SPRAY PARTICLES CAN BE CARRIED BY WIND INTO AREAS WHERE SENSITIVE CROPS OR PLANTS ARE GROWING OR WHEN TEMPERATURE INVERSIONS EXIST.

Apply 3 to 50 gal of diluted spray per treated acre when using ground application equipment or 1 to 10 gal of diluted spray per treated acre (2 to 20 gal of diluted spray per treated acre for preharvest uses) in a water-based carrier when using aerial application equipment. Use the higher level of the listed spray volumes when treating dense or tall vegetation. Use coarse sprays.

Select nozzles designed to produce minimal amounts of fine spray particles. Spray with nozzles as close to the weeds as is practical for good weed coverage.

To avoid uneven spray coverage, this product should not be applied during periods of gusty wind or when wind is in excess of 15 mph.

Avoid disturbing (e.g., cultivating or mowing) treated areas for at least 7 days following application.

BEST STEWARDSHIP PRACTICES

This product provides effective broadleaf weed and brush control when properly applied. Best stewardship practices in all mixing, loading, and application operations not only maximize weed control, but also protect ground and surface waters and minimize off-target movement.

This chemical is known to leach through soil into ground water under certain conditions as a result of agricultural use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in ground-water contamination.

WEED RESISTANCE MANAGEMENT

Dicamba, the active ingredient in this product, is a Group 4 herbicide based on the mode of action classification system of the Weed Science Society of America. Any weed population may contain plants naturally resistant to Group 4 herbicides. Weed species resistant to Group 4 herbicides may be effectively managed utilizing another herbicide from a different Group or by using other cultural or mechanical practices.

To delay herbicide resistance consider the following:

- Avoid the consecutive use of this product or other target site of action Group 4 herbicides that have a similar target site of action, on the same weed species.
- Use tank-mixtures or premixes with herbicides from different target site of action Groups as long as the involved products are all registered for the same use, have different sites of action, and are both effective at the tank mix or prepack rate on the weed(s) of concern.
- Base herbicide use on comprehensive IPM program.
- Monitor treated weed populations for loss of field efficacy.
- Contacting your local extension specialist, certified crop advisors, and/or manufacturer for herbicide resistance management and/or integrated weed management recommendations for specific crops and resistant weed biotypes.

GROUND AND SURFACE WATERS PROTECTION

1) Point source contamination – To prevent point source contamination, do not mix, or load this pesticide product within 50 feet of wells (including abandoned wells and drainage wells), sink holes, perennial or intermittent streams and rivers, and natural or impounded lakes and reservoirs. Do not apply pesticide product within 50 feet of wells. This setback does not apply to properly capped or plugged abandoned wells according to state and local requirements and does not apply to impervious pad or properly diked mixing/loading areas as described in this section.

Mixing, loading, rinsing, or washing operations performed within 50 feet of a well are allowed only when conducted on an impervious pad constructed to withstand the weight of the heaviest load that may be on or moved across the pad. The pad must be self-contained to prevent surface water flow over or from the pad. The pad capacity must be maintained at 110% that of the largest pesticide container or application equipment used on the pad and have sufficient capacity to contain all product spills, equipment or container leaks, equipment washwaters, and rainwater that may fall on the pad. The containment capacity does not apply to vehicles delivering pesticide shipments to the mixing/loading site. State may have in effect additional requirement regarding well-head setbacks and operational containment.

Care must be taken when using this product to prevent: a) back siphoning into wells, b) spills or c) improper disposal of excess pesticide, spray mixtures or rinsates. Check valves or antisiphoning devices must be used on all mixing equipment.

- 2) Movement by surface runoff through soil – Do not apply under conditions which favor runoff. Do not apply to impervious substrates such as paved or highly compacted surfaces in areas with high potential for ground water contamination. Ground water contamination may occur in areas where soils are permeable or coarse and ground water is near the surface. Do not apply to soils classified as sand with less than 3% organic matter and where ground water depth is shallow. To minimize the possibility of ground water contamination, carefully follow specified application rates as affected by soil type in the INFORMATION section of this label.
- 3) Movement by water erosion of treated soil – Do not apply or incorporate this product through any type of irrigation equipment nor by flood or furrow irrigation. Ensure treated areas have received at least one-half inch rainfall (or irrigation) before using tailwater for subsequent irrigation of other fields.

SENSITIVE CROP PRECAUTIONS

This product may cause injury to desirable trees and plants, particularly beans, cotton, flowers, fruit trees, grapes, ornamentals, peas, potatoes, soybeans, sunflowers, tobacco, tomatoes, and other broadleaf plants when contacting their roots, stems, or foliage. These plants are most sensitive to this product during their development or growing stage.

FOLLOW THE PRECAUTIONS LISTED ON THIS LABEL WHEN USING THIS PRODUCT

- Avoid areas where either possible downward movement into the soil or surface washing may cause contact of this product with the roots of desirable plants such as trees and shrubs.
- Avoid making applications when spray particles may be carried by air currents to areas where sensitive crops and plants are growing or when temperature inversions exist. Do not spray near sensitive plants if wind is gusty or in excess of 5 mph and moving in the direction of adjacent sensitive crops. Leave an adequate buffer zone between area to be treated and sensitive plants. Coarse sprays are less likely to drift out of the target area than fine sprays.
- Use coarse sprays to avoid potential herbicide drift. Select nozzles which are designed to produce minimal amounts of fine spray particles. Examples of nozzles designed to produce coarse sprays via ground applications are Delavan Raindrops, Spraying Systems XR flat fans, or large capacity flood nozzles such as D10, TK10, or greater capacity tips. Keep the spray pressure at or below 20 psi and the spray volume at or above 20 gpa, unless otherwise required by the manufacturer of drift-reducing nozzles. Consult with your spray nozzle supplier concerning the choice of drift-reducing nozzles.
- Agriculturally approved drift-reducing additives may be used.
- Injury is more likely to occur if this product is applied adjacent to sensitive crops when the temperature on the day of application is expected to exceed 85° F.
- To avoid injury to desirable plants, equipment used to apply this product should be thoroughly cleaned (see PROCEDURE FOR CLEANING SPRAY EQUIPMENT) before reusing to apply any other chemicals.

All crop uses of this product are intended for a normal growing interval between planting and harvest. No crop rotation restrictions exist if normal harvest of treated crop has occurred. If this interval is shortened, such as in cover crops that will be plowed under, do not follow up with the planting of a sensitive crop.

Crops growing under stress conditions such as drought, poor fertility, or foliar damage due to hail, wind, or insects, can exhibit various injury symptoms that may be more pronounced if herbicides are applied.

Consult your local or state authorities for possible application restrictions and advice concerning these and other special local use situations. **Tank mix recommendations are for use only in states where the tank mix product and application site are registered. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.**

BAND TREATMENTS

This product may be applied as a band treatment. Use the following formulas to determine the appropriate rate and volume per treated acre.

$$\frac{\text{Band width in inches}}{\text{Row width in inches}} \times \text{Broadcast RATE treated acre} = \text{Band RATE per treated acre}$$

$$\frac{\text{Band width in inches}}{\text{Row width in inches}} \times \text{Broadcast VOLUME treated acre} = \text{Band VOLUME per treated acre}$$

COMPATIBILITY TEST

Before mixing in the spray tank, it is advisable to test compatibility by mixing all components in a small container in proportionate quantities (see following table).

Amount of Herbicide to Add to One Pint of Spray Carrier
(Assuming volume is 25 gal per Acre)

HERBICIDE FORMULATIONS	RATE PER ACRE	LEVEL TEASPOONS
DRY	1 lb	1 ½
LIQUID	1 pt	½

If herbicide(s) do not ball-up or form flakes, sludge, gels, oily films or layers, or other precipitates, then the tested spray mix is compatible. Usually, incompatibility in any of the previously described forms will occur within 5 minutes after mixing.

If components are incompatible, the use of a compatibility agent is recommended. Rerun the COMPATIBILITY TEST with a suitable compatibility agent (1/4 teaspoon is equivalent to 2 pints per 100 gal of fluid fertilizer).

PROCEDURE FOR CLEANING SPRAY EQUIPMENT

Steps 1 through 4 are suggested for thorough cleaning of spray equipment following applications of this product or tank mixes of this product or tank mixes of this product plus 2,4-D amine.

- 1) Hose down thoroughly the inside as well as outside surfaces of equipment while filling the spray tank half full of water. Flush by operating sprayer until the system is purged of the rinse water.
- 2) Fill tank with water while adding 1 quart of household ammonia for every 25 gal of water. Operate the pump to circulate the ammonia solution through the sprayer system for 15 to 20 minutes and discharge a small amount of the ammonia solution through the boom and nozzles. Let the solution stand for several hours, preferably overnight.
- 3) Flush the solution out of the spray tank through the boom.
- 4) Remove the nozzles and screens and flush the system with two full tanks of water.

Steps 5 through 8 are suggested for thorough cleaning of spray equipment used to apply this product as a tank mix with wettable powders (WP), emulsifiable concentrates (EC), or other types of water-dispersible formulations. This product tank mixed with water-dispersible formulations requires the use of a water-detergent rinse.

- 5) Complete step 1.
- 6) Fill tank with water while adding 2 lb of detergent for every 40 gal of water. Operate the pump to circulate the detergent solution through the sprayer system for 5 to 10 minutes and discharge a small amount of the solution through the boom and nozzles. Let the solution stand for several hours, preferably overnight.
- 7) Flush the detergent solution out of the spray tank through the boom.
- 8) Repeat step 1, and follow with steps 2, 3, and 4.

WEED LIST

This is a list of weeds which may be treated with this product in accordance with this label as specified under the RATES AND TIMING sections of the individual Use headings. Proper usage of this product will give control or growth suppression of many ANNUAL, BIENNIAL, and PERENNIAL broadleaf weeds, and many WOODY brush and vine species including:

ANNUALS		
Amaranth, Spiny (Spiny Pigweed)	Ladysthumb	Radish, Wild
Aster, Slender	Lambsquarters, Common	Ragweed, Common
Bedstraw	Lambsquarters, (triazine resistant)	Ragweed, Giant (Buffalo weed)
Beggar weed, Florida	Lettuce, Prickly	Ragweed, Lance-Leaf
Broom weed, Common	Mallow, Common	Rubber weed, Bitter (Bitterweed)
Buckwheat (Wild)	Mallow, Venice	Sesbania, Hemp
Buffalobur	Mayweed	Shepherdspurse
Burclover, California	Morningglory, Ivyleaf	Sicklepod
Burcucumber	Morningglory, Tall	Sida, Prickly (Teaweed)
Buttercup, Roughseed	Mustard, Tansy	Smartweed, Green
Carpetweed	Mustard, Wild	Smartweed, Pennsylvania
Catchfly, Nightflowering	Mustard (Yellowtops)	Sneezeweed, Bitter
Chamomile, Corn	Nightshade, Black	Sowthistle, Annual
Chickweed, Common	Pennycress, Field (Fanweed, Frenchweed, Stinkweed)	Sowthistle, Spiny
Clovers (Annual)		Spikeweed, Common
Cockle, Corn	Pepperweed, Virginia (Peppergrass)	Spurge, Prostrate
Cockle, Cow		Spurry, Corn
Cocklebur, Common	Pigweed, Prostrate	Starbur, Bristly
Croton, Tropic	Pigweed, Redroot (Carelessweed)	Sumpweed, Rough
Croton, Woolly		Sunflower, Common (Wild)
Daisy, English	Pigweed, Rough	Sunflower, Volunteer
Evening Primrose, Cutleaf	Pigweed, Smooth	Thistle, Russian
Fleabane, Annual	Pigweed (triazine resistant)	Velvetleaf
Goosefoot, Nettleleaf	Pigweed, Tumble	Waterhemp
Henbit	Poorjoe	Waterprimrose, Winged
Jimsonweed	Puncturevine	Wormwood, Annual
Knotweed	Purslane, Common	
Kochia	Pusley, Florida	
BIENNIALS		
Burdock, Common	Knapweed, Diffuse	Sweetclover
Carrot, Wild (Queen Anne's Lace)	Knapweed, Spotted	Teasel
Cockle, White	Mallow, Dwarf	Thistle, Bull
Evening Primrose, Common	Plantain, Bracted	Thistle, Milk
Geranium, Carolina	Ragwort, Tansy	Thistle, Musk
Gromwell	Starthistle, Yellow	Thistle, Plumeless

PERENNIALS		
*Alfalfa	Goldenweed, Common	Spurge, Leafy
Artichoke, Jerusalem	Hawkweed	Sundrop, Halfshrub (Evening Primrose)
Aster, Spiny	Horsenettle, Carolina	
Aster, Whitehead	Ironweed	Thistle, Canada
Beadstraw, Smooth	Knapweed, Black	Toadflex, Dalmation
Bindweed, Field	Knapweed, Russian	Tropical Soda Apple
Bindweed Hedge	Mare's Tail (Horseweed)	Trumpetcreeper (Buckvine)
Blueweed, Texas	Milkweed, Climbing	Vetch
*Bursage (Bur Ragweed, Lakewood, Povertyweed)	Milkweed, Common	Waterhemlock
	Milkweed, Honeyvine	Waterprimrose, Creeping
Bursage, Woollyleaf (Lakewood)	Milkweed, Western Whorled	*Woodsorrel, Creeping Common Yellow
Buttercup, Tall	Nettle, Stinging	
Campion, Bladder	Nightshade, Silverleaf (White Horsenettle)	Wormwood, Common
Chickweed, Field		Wormwood, Louisiana
Chickweed (Mouseear, Canada)	Onion, Wild	*Yankee weed
Chicory	*Plantain, Broadleaf	Yarrow, Common
*Clover, Hop	Plantain, Buckhorn	
*Dandelion, Common	Pokeweed	
*Dock, Broadleaf (Bitterdock)	Ragweed, Western	
*Dock, Curly	Redvine	
Dogbane, Hemp	Sericia Lespedeza	
*Dogfennel (Cypressweed)	Smartweed, Swamp	
Fern, Bracken	Snakeweed, Broom	
Garlic, Wild	*Sorrel, Red (Sheep Sorrel)	
Goldenrod, Canada	Sowthistle	
Goldenrod, Missouri	Sowthistle, Perennial	

*Labeled perennials may be controlled using this product at rates lower than those directed for other listed perennial weeds. (See APPLICATION RATES AND TIMING sections in this label.)

WOODY		
Alder	*Hawthorn (Thornapple)	*Plum, Sand (Wild Plum)
Ash	Hemlock	Rabbitbrush
Aspen	Hickory	*Redcedar, Eastern
Basswood	Honeylocust	*Rose, McCartney
Beech	Honeysuckle	*Rose, Multiflora
Birch	Hornbeam	Sagebrush, Fringe
*Blackberry	Huckleberry	Sassafras
*Blackgum	Huisache	Serviceberry
*Cedar	Ivy, Poison	Spicebush
Cherry	Kudzu	Spruce
Chinquapin	Locust, Black	Sumac
Cottonwood	Maple	*Sweetgum
*Creosotebush	Mesquite	Sycamore
Cucumbertree	Oak	Tarbush
*Dewberry	Oak, Poison	Willow
*Dogwood	Olive, Russian	Witchhazel
Elm	Persimmon, Eastern	*Yaupon
Grape	Pine	*Yucca

*Growth Suppression

FIELD, SEED*, POPCORN*, AND SILAGE CORN

Observe all RESTRICTIONS, PRECAUTIONS and read and follow MIXING, APPLICATION and CLEANING instructions as well as the following:

PRECAUTIONS

*Before applying this product to seed corn or popcorn, verify with your local seed corn company (supplier) the selectively on your inbred line or variety of popcorn. This precaution will help avoid potential injury of sensitive varieties.

Applications of this product to corn during periods of rapid growth may result in temporary leaning. Corn will usually become erect within 3 to 7 days. Cultivation should be delayed until after corn is growing normally to avoid breakage.

Agriculturally approved surfactants or sprayable fertilizers (1/2 to 1 gal per acre of 28%, 30%, or 32% urea ammonium nitrate or 2.5 lbs per acre spray grade ammonium sulfate*) may be added to the spray mixture to improve postemergence weed control, particularly in dry growing conditions.

Corn may be harvested or grazed for feed once the crop has reached the ensilage (milk) stage or later in maturity.

Several synthetic pyrethroid insecticides are labeled for tank mix applications of this product. Refer to their label for specific directions.

RESTRICTIONS

- Not for use in California.
- Do not apply this product more than twice during a growing season.
- Do not exceed a total of 1 ½ pts of this product per treated acre per crop year.
- Allow two weeks or more between applications of this product.
- Do not use adjuvants containing penetrants such as petroleum-based oils after crop emergence or crop injury may result.
- Direct contact of this product with corn seed must be avoided. If corn seeds are less than 1 ½ inches below the surface, delay application until corn has emerged.
- This product is not registered for use on sweet corn.

WEEDS CONTROLLED

This product will control many ANNUAL broadleaf weeds or give growth suppression of many PERENNIAL broadleaf weeds commonly found in corn.

(Refer to the WEED LIST).

For best performance, make application when weeds have emerged and are actively growing.

Preemergence control of cocklebur, velvetleaf, and jimsonweed may be reduced if conditions such as low temperature or lack of soil moisture cause delayed or deep germination of weeds.

PREPLANT/PREEMERGENCE IN NO-TILLAGE CORN

Applications of this product may be made before, during, or after planting to emerged and actively growing broadleaf weeds. Apply this product at 1 pt per treated acre on medium or fine textured soils containing 2% or greater organic matter. Use ½ pt per treated acre on coarse textured soils (sand, sandy loam, and loamy sand) or medium and fine textured soils with less than 2% organic matter.

When planting into a legume sod (e.g., alfalfa or clover), apply this product after 4 to 6 inches of regrowth has occurred.

PREEMERGENCE IN CONVENTIONAL OR REDUCED TILLAGE CORN

This product may be applied after planting and prior to corn emergence. Application at 1 pt per treated acre may be made to medium or fine textured soils which contain 2% or greater organic matter. Do not apply to coarse textured soils (sand, sandy loam, and loamy sand) until after crop emergence (see Early Postemergence uses below).

Preemergence application of this product does not require mechanical incorporation to become active. A shallow mechanical incorporation is recommended if application is not followed by adequate rainfall or sprinkler irrigation. Avoid tillage equipment (e.g., drags, harrows) which concentrate treated soil over seed furrow.

EARLY POSTEMERGENCE (ALL TILLAGE SYSTEMS)

Spike through 8 inch tall corn

This product at 1 pt per treated acre may be applied during the period from corn emergence through the five leaf stage or 8 inches tall, whichever comes first. Reduce the rate to ½ pt per treated acre if corn is growing on coarse textured soils (sand, sandy loam, loamy sand). See Late Postemergence applications given below if the 6th true leaf is emerging from whorl or corn is greater than 8 inches tall.

LATE POSTEMERGENCE (ALL TILLAGE SYSTEMS)

8 to 36 inch tall corn

Application of this product at ½ pt per treated acre may be made from 8 to 36 inch tall corn or 15 days before tassel emergence, whichever comes first. For best performance, make applications when weeds are less than 3 inches tall.

Make directed spray application when: (1) corn leaves prevent proper spray coverage; (2) sensitive crops are growing nearby; (3) tank mixing with 2,4-D.

RESTRICTIONS: Do not apply this product when soybeans are growing nearby if any of these conditions exist:

- corn is more than 24 inches tall
- soybeans are more than 10 inches tall
- soybeans have begun to bloom

OVERLAY (SEQUENTIAL) TREATMENTS

This product may be applied to ground previously treated with one or more of the following herbicides registered for use in corn:

acetochlor (Surpass®, Harness®)	dimethenamid (Frontier®)	s-metolachlor (Dual® II Magnum)
alachlor (Lasso®)	EPTC (Eradicane®)	paraquat (Gramoxone®)
atrazine	Guardsman	pendimethalin (Prowl®)
Bicep II Magnum®	glyphosate (Roundup®)	simazine (Princep®)
Bullet®	halosulfuron (Permit®)	Surpass®
butylate (Sutan+®)	Lariat®	
Clarity®	Marksman®	

Apply this product at ½ pint per treated acre to ground previously treated with the labeled rates of CLARITY or MARKSMAN herbicides. Allow at least 2 weeks between applications. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

TANK MIX TREATMENTS

This product may be tank mixed with one or more of, but not limited to, the following herbicides for control of grasses or additional broadleaf weeds in corn. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

2,4-D	dimethenamid (Frontier®)	paraquat (Gramoxone®)
acetochlor (Surpass®, Harness®)	glyphosate (Roundup®)	pendimethalin (Prowl®)
alachlor (Lasso®)	s-metolachlor (Dual® II Magnum)	primisulfuron (Beacon)
atrazine	Nicosulfuron (Accent®)	simazine (Princep®)

COTTON (EXCEPT CALIFORNIA)

Pre-plant Application: Apply up to 8 fluid ounces of this product per acre to control emerged broadleaf weeds prior to planting cotton in conventional or conservation tillage systems.

For best performance, apply this product when weeds are in the 2 to 4 leaf stage and rosettes are less than 2 inches across. Following application of this product and a minimum accumulation of 1 inch of rainfall or overhead irrigation, a waiting interval of 21 days is required per 8 fluid ounces per acre or less. These intervals must be observed prior to planting Cotton.

RESTRICTIONS

- DO NOT apply pre-plant to Cotton West of the Rockies.
- DO NOT make pre-plant applications of this product to geographic areas with an average annual rainfall less than 25 inches.
- If applying a Spring pre-plant treatment following application of a Fall pre-plant (post-harvest) treatment, the combination of both treatments must not exceed 4 pints of this product (2 lbs. a.e.) per year.

TANK MIX TREATMENTS

For control of Grasses or additional Broadleaf weeds, this product may be tank-mixed with Bladex®, Caparol®, Gramoxone Extra and Roundup herbicides. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

SORGHUM (MILO)

Observe all DIRECTIONS, RESTRICTIONS, AND PRECAUTIONS, including the reference to crops growing under stress, and read and follow MIXING, APPLICATION and CLEANING instructions.

PRECAUTIONS

Applications of this product to sorghum during periods of rapid growth may result in temporary leaning of plants or rolling of leaves. These effects are usually outgrown within 10 to 14 days.

RESTRICTIONS

- Do not graze or feed treated sorghum forage or silage prior to mature grain stage.
- If sorghum is grown for pasture or hay, refer to the PASTURE use section of this label. Do not apply this product to sorghum grown for seed production.
- Make no more than one application per growing season.

WEEDS CONTROLLED

This product, when applied at the specified rate for sorghum, will control many actively growing ANNUAL broadleaf weeds and will reduce competition from established PERENNIAL broadleaf weeds as well as control their seedlings (Refer to WEED LIST).

RATES AND TIMINGS

This product may be applied to emerged and actively growing weeds at least 15 days prior to planting. Postemergence application of this product must be made after sorghum is in the spike stage (all sorghum emerged) but before sorghum is 15 inches tall. For best performance, make applications when sorghum is in the 3 to 5 leaf stage and weeds are small (less than 3 inches tall). Use drop pipes (drop nozzles) if sorghum is taller than 8 inches. Keeping the spray off the sorghum leaves and out of the whorl will reduce the likelihood of crop injury and improve spray coverage of weed foliage.

BROADCAST RATE PER TREATED ACRE:

½ pt (1/4 lb ai)

TANK MIX TREATMENTS

This product plus Atrazine

For improved control of emerged, actively growing broadleaf weeds including triazine resistant species and added suppression of perennial broadleaf weeds, tank mix ½ pt of this product with the labeled rate of atrazine per treated acre. For control of grasses (less than 1.5 inches tall), tank mix ½ pt of this product with the labeled rate of atrazine per treated acre. For best performance and minimal crop injury, make application when sorghum is 3 to 8 inches tall and when broadleaf weeds are small (less than 6 inches tall). Application of atrazine must be made before sorghum is beyond 12 inches tall. The atrazine rate will depend upon soil texture and length of residual weed control desired. Follow all state and federal restrictions pertaining to atrazine applications. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

This product plus BUCTRIL®

For improved control of broadleaf weeds, tank mix ½ pt of this product with the labeled rate of Buctril per treated acre. Make application at 4 leaf to 15 inch tall sorghum. Use drop nozzles to direct spray beneath sorghum leaves when sorghum is greater than 8 inches tall. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

OVERLAY (SEQUENTIAL) TREATMENTS

This product may be applied to ground previously treated with one or more of the following herbicides.

Herbicide
atrazine
s-metolachlor (Dual II Magnum ®) (Concep® treated seed)

PREHARVEST USES

For Use Only In the States of Texas and Oklahoma

This product may be applied for weed suppression any time after the sorghum has reached the soft dough stage. An agriculturally approved surfactant may be used to improve performance. For aerial applications use at least 2 gal of water-based carrier per treated acre.

RESTRICTIONS: Delay harvest until 30 days after treatment.

BROADCAST RATE PER TREATED ACRE: ½ pt (1/4 lb ai)

**SMALL GRAINS (WHEAT, BARLEY, AND OATS)
Not Underseeded to Legumes**

IMPORTANT

Observe all RESTRICTIONS, PRECAUTIONS and read and follow CLEANING, MIXING and APPLICATION instructions.

There is no waiting period between treatment and grazing for non-lactating dairy animals.

RESTRICTIONS

- Preharvest interval (PHI) restriction for grain is 7 days.
- If small grains are used for pasture hay, the following restrictions apply:
 - Do not remove animals for slaughter from treated area prior to 30 days after last application.
 - Treated areas may not be grazed by lactating dairy animals before 7 days after treatment.
 - Do not harvest hay from treated areas before 37 days after treatment.

WEEDS CONTROLLED

This product, or combinations with listed tank mix partners, will provide control or suppression of annual broadleaf weeds listed below. For improved control of listed weeds, it is recommended that this product be applied in a tank mix with other herbicides. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

¹These weeds will be controlled with T-REX Dicamba Herbicide tank mixtures. Refer to tank mix label for specific weeds controlled.

²This product tank mixes will provide suppression of established broadleaf weeds and control of their seedlings.

RATES AND TIMINGS

Application of this product may be made before, during or after planting of small grains. For best performance, make applications when weeds are in the 2 to 3 leaf stage and rosettes are less than 2 inches across. Application of this product to small grains during periods of rapid growth may result in crop leaning. This condition is temporary and will not reduce crop yields.

Use this product at 2–4 fl oz per treated acre in wheat, fall seeded barley, and oats, and at 2-3 fl oz per treated acre in spring seeded barley. Use the higher level of listed rate ranges when treating difficult to control weeds such as kochia, Russian thistle, and prickly lettuce or dense vegetative growth.

This product used in a tank mix with other herbicides offers the best spectrum of weed control and herbicide tolerance or resistant weed management. Refer to specific crop for this product rate and application timing.

For applications prior to the emergence of weeds or when sulfonylurea resistant weeds are present or suspected, use a minimum of 3 fl oz per treated acre of this product with a tank mix herbicide. Non-sulfonylurea herbicides such as 2,4-D or MCPA tank mixed with this product will offer more consistent control of sulfonylurea resistant weeds.

When tank mixing with sulfonylurea herbicides, such as Ally®, Amber®, Express®, and Harmony® Extra use an agriculturally approved surfactant of at least 80% active ingredient at the rate of 1 to 4 pt/100 gal of spray or not more than 0.25 to 0.5% by volume. Use the highest rate of surfactant when using the lower rate ranges of the tank mix and/or when treating more mature and difficult to control weeds or dense vegetative growth.

FALL AND SPRING SEEDED WHEAT

RESTRICTIONS: THIS PRODUCT MUST BE APPLIED TO FALL SEEDED WHEAT PRIOR TO THE JOINTING STAGE. APPLICATIONS TO SPRING SEEDED WHEAT MUST BE MADE BEFORE WHEAT EXCEEDS THE 5 LEAF STAGE. Early developing wheat varieties such as TAM107, MADISON, or WAKEFIELD must receive application between early tillering and the jointing stage. Care should be taken in staging these varieties to be certain that the application occurs prior to the jointing stage.

TANK MIX TREATMENTS

This product may be tank mixed with one or more, but not limited to, the following herbicides. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

BROADCAST RATE PER TREATED ACRE

Apply 2-4 fl oz this product with the labeled rates of the following products:

Product	Active Ingredient
2,4-D amine or ester	2,4-D
MCPA amine or ester	MCPA
Ally®	metsulfuron-methyl
Amber®	triasulfuron
Express®	thifensulfuron + tribenuron-methyl
Harmony® Extra	thifensulfuron + tribenuron-methyl
Buctril®	Bromoxynil
Bronate®	bromoxynil + MCPA
Curtail®	clopyralid + 2,4-D
Stinger	clopyralid
Karmex®	Diuron
Sencor®	Metribuzin

SPECIAL USE TANK MIXES FOR SPRING AND FALL SEEDED WHEAT (SEE FOOTNOTES FOR APPLICABLE USES)

Apply 3-4 fl oz of this product with the labeled rates of the following products:

Product	Active Ingredient
2,4-D or MCPA amine	2,4-D or MCPA
2,4-D or MCPA ester	2,4-D or MCPA
Ally	metsulfuron-methyl
Amber	triasulfuron
Express	thifensulfuron + tribenuron-methyl
Harmony Extra	thifensulfuron + tribenuron-methyl
Ally + 2,4-D amine or ester	metsulfuron methyl +2,4-D
Amber + 2,4-D amine or ester	triasulfuron + 2,4-D
Express + 2,4-D amine or ester	(thifensulfuron + tribenuron-methyl) + 2,4-D
Harmony Extra + 2,4-D amine or ester	(thifensulfuron + tribenuron- methyl) + 2,4-D
Roundup	glyphosate

FALL SEEDED BARLEY

RESTRICTIONS: THIS PRODUCT MUST BE APPLIED TO FALL SEEDED BARLEY PRIOR TO THE JOINTING STAGE.

Note: For spring barley varieties that are seeded during the winter months or later, follow the rates and timings given for spring seeded barley.

TANK MIX TREATMENTS

This product may be tank mixed with one or more of the following herbicides. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

BROADCAST RATE PER TREATED ACRE

Apply 2-4 fl oz this product with the labeled rates of the following products:

Product	Active Ingredient
2,4-D amine or ester	2,4-D
MCPA amine or ester	MCPA
Ally®	metsulfuron-methyl
Amber®	triasulfuron
Express®	thifensulfuron + tribenuron-methyl
Harmony® Extra	thifensulfuron + tribenuron-methyl
Sencor®4	metribuzin
Buctril®	bromoxynil
Bronate®	bromoxynil + MCPA

SPRING SEEDED BARLEY

RESTRICTIONS: THIS PRODUCT MUST BE APPLIED BEFORE SPRING SEEDED BARLEY EXCEEDS THE 4-LEAF STAGE.

TANK MIX TREATMENTS

This product may be tank mixed with one or more of the following herbicides. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

BROADCAST RATE PER TREATED ACRE

Apply 2-3 fl oz this product with the labeled rates of the following products:

Product	Active Ingredient
MCPA amine or ester	MCPA
Ally®	metsulfuron-methyl
Amber®	triasulfuron
Express®	thifensulfuron + tribenuron-methyl
Harmony® Extra	thifensulfuron + tribenuron-methyl
Sencor®	metribuzin
Buctril®	bromoxynil
Bronate®	bromoxynil + MCPA

FALL AND SPRING SEEDED OATS

RESTRICTIONS: THIS PRODUCT MUST BE APPLIED BEFORE SPRING SEEDED OATS EXCEED THE 5 LEAF STAGE. APPLICATIONS TO FALL SEEDED OATS MUST BE MADE PRIOR TO THE JOINTING STAGE.

TANK MIX TREATMENTS

This product may be tank mixed with one or more of the following herbicides. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

BROADCAST RATE PER TREATED ACRE

Apply 2-4 fl oz this product with the labeled rates of the following products:

Product	Active Ingredient
MCPA amine or ester	MCPA

SUGARCANE

Observe all RESTRICTIONS AND PRECAUTIONS. Read and follow MIXING, APPLICATION and CLEANING instructions. Consult your local or state authorities for possible application restrictions, especially concerning aerial applications and advice concerning special local use situations.

RESTRICTIONS

- The pre-harvest interval (PHI) for Sugarcane is 87 days.
- Do not exceed a total of 2 applications of this product per year.

WEEDS CONTROLLED

This product, when applied at specified rates, will control many ANNUAL, BIENNIAL, and PERENNIAL broadleaf weeds commonly found in sugarcane. (Refer to WEED LIST).

RATES AND TIMINGS

Application of this product may be made any time after weeds have emerged and are actively growing but before the close-in stage of sugarcane. Application rates and timings of this product are given below. Use the higher level of listed rate ranges when treating dense vegetative growth.

Weed Stage and Type	Amount Product	Broadcast Rate per Treated Acre lb of ai
Annual		
Small, actively growing	½ - 1 pt	¼ - ½
Established weed growth	1 - 1 ½ pts	½ - ¾
Biennial	1 - 2 pts	½ - 1
Perennial	2 pts	1 ¹

¹Application made over the top of actively growing sugarcane may result in crop injury.

When possible, direct the spray beneath the sugarcane canopy in order to minimize the likelihood of crop injury. The use of directed sprays will also aid in maximizing spray coverage of weed foliage.

TANK MIX TREATMENTS

This product may be tank mixed with one or more of, but not limited to, the following herbicides for control of grasses or additional broadleaf weeds. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

Herbicide
Ametryn (Evik®)
Asulam (Asulox®)
atrazine
2,4-D

PASTURE, HAY, RANGELAND, AND FARMSTEAD (NON-CROPLAND)

This product is labeled for use on pasture, hay, rangeland, and general farmstead (non-cropland) (including fence rows and non-irrigation ditch banks), for broadleaf weed and brush control. This product may also be applied to non-cropland areas for the control of broadleaf weeds in Noxious Weed Control Programs, Districts or Areas including broadcast or spot treatment of roadsides and highways, utilities, railroad, and pipeline rights-of-way. Noxious weeds must be recognized at the State level but programs may be administered at State, County, or other levels.

Observe all RESTRICTIONS AND PRECAUTIONS, read and follow MIXING, APPLICATION and CLEANING instructions.

The product uses described in this section also pertain to small grains (such as barley, forage sorghum, oats, rye, sudangrass or wheat) grown for pasture use only.

PRECAUTIONS

NEWLY SEEDED AREAS may be severely injured if rates of this product are greater than 1 pt/A.

ESTABLISHED GRASS CROPS growing under stress can exhibit various injury symptoms that may be more pronounced if herbicides are applied. Bentgrass, carpetgrass, buffalograss, and St. Augustine grass may be injured at rates exceeding 1 pt of this product (1/2 lb ai) per treated acre. Usually colonial bentgrasses are more tolerant than creeping types. Velvetgrasses are most easily injured. Treatments will kill or injure alfalfa, clovers, lespedeza, wild winter peas, vetch, and other legumes.

THERE IS NO WAITING PERIOD BETWEEN TREATMENT AND GRAZING FOR NON-LACTATING ANIMALS.

RESTRICTIONS

- The pre-harvest interval (PHI) for grass forage is 0 days.
- The pre-harvest interval (PHI) for grass hay is 7 days.
- Do not exceed a total of 2 application of this product per year.
- Do not remove animals for slaughter from treated area prior to 30 days after last application.

TIMING RESTRICTIONS FOR LACTATING DAIRY ANIMALS FOLLOWING TREATMENT

This Product	Days Before Grazing	Days Before Hay Harvest
Up to 1 pt (1/2 lb ai)	7 days	37 days
Up to 2 pts(1 lb ai)	21 days	51 days

Note: It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

MIXING AND APPLICATION

This product can be applied using water, oil in water emulsions (including invert systems), or sprayable fluid fertilizer as a carrier. A COMPATIBILITY TEST (see COMPATIBILITY TEST section) should be made prior to tank mixing.

To prepare oil in water emulsions, half-fill spray tank with water, then add the appropriate amount of emulsifier. With continuous agitation, slowly add the herbicide and then the oil (such as diesel oil or fuel oil) or a premix of oil plus additional emulsifier to spray tank. Complete filling of spray tank with water. Maintain vigorous agitation during spray operation to prevent oil and water from forming separate layers.

This product may be applied broadcast using either ground or aerial application equipment. When using ground equipment, apply 3 to 600 gallons of diluted spray per treated acre. Volume of spray applied will depend on the height, density, and type of weeds or brush being treated and on the type of equipment being used. When using aerial equipment, apply 1 to 40 gallons of diluted spray per treated acre in a water-based carrier.

This product may be applied to individual clumps or small areas (SPOT TREATMENT) of undesirable vegetation using handgun or similar types of application equipment. Apply diluted sprays to allow complete wetting (up to runoff) of foliage and stems.

Herbicide adjuvants or other spray additives (emulsifiers, surfactants, wetting agents, drift control agents, or penetrants) may be used for wetting, penetration, or drift control. Spray additives must be agriculturally approved when used in pasture applications. If spray additives are used, read and follow all use directions, restrictions and precautions on product label.

WEEDS CONTROLLED

This product, when applied at specified rates, will give control of many ANNUAL, BIENNIAL, and PERENNIAL broadleaf weeds, and many WOODY brush and vine species commonly found in pasture, hay, rangeland, and general farmstead (non-cropland) areas. (Refer to WEED LIST.) Noted (*) PERENNIAL weeds may be controlled with lower rates of either this product or this product plus 2,4-D. See the following RATES AND TIMINGS section.

RATES AND TIMINGS

Application rates and timing of this product are given in the following table. Use the higher level of listed rate ranges when treating dense or tall vegetative growth.

Weed Stage and Type	Amount Product	Broadcast Rate per Treated Acre (lb of ai)
Annual		
Small, actively growing	½ - 1.0 pt	¼ - ½
Established weed growth	1.0 – 1 ½ pts	½ - ¾
Biennial¹		
Rosette diameter		
Less than 3 inches	½ - 1.0 pt	¼ - ½
3 inches or more	1.0 – 2.0 pts	½ - 1.0
Bolting	2.0 pts	1.0
Perennial		
Suppression or top growth control	½ - 1.0 qt	½ - 1.0
Noted (*) perennials	1.0 qt	1.0*
Woody Brush & Vines		
Top growth suppression	½ - 1.0 qt	½ - 1.0
Top growth control ²	1.0 qt	1.0

¹For best performance, make application when Biennial weeds are in the rosette stage.

²Species in WEED LIST will require tank mixtures for adequate control.

TANK MIX TREATMENTS

This product may be tank mixed with one or more, but not limited to, the following herbicides for control of grasses, additional broadleaf weeds, and woody brush and vines. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

Herbicide
Pasture, hay, rangeland, and general farmstead (non-cropland) use:
glyphosate (Roundup®)
metsulfuron methyl (Ally)
paraquat (Gramoxone)
picloram (Tordon®)
triclopyr (Garlon®)
2,4-D

Due to the variations that may occur in formulated products and specific use ingredients (e.g., water supplies), a COMPATIBILITY TEST (see COMPATIBILITY TEST) is recommended prior to actual tank mixing.

CUT SURFACE TREE TREATMENTS

This product may be applied as a cut surface treatment for control of unwanted trees and prevention of sprouts of cut trees. A mix of 1 part this product with 1 to 3 parts water should be used in application. Use the lower dilution when treating difficult-to-control species.

FRILL OR GIRDLE TREATMENTS: Make a continuous cut or a series of overlapping cuts using an axe to girdle tree trunk. Spray or paint cut surface with product/water mix.

STUMP TREATMENTS: Spray or paint freshly cut surface with the water mix. The area adjacent to the bark should be thoroughly wet.

TANK MIX TREATMENTS: For more rapid foliar effects, 2,4-D may be added to this product/water mix. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

DORMANT APPLICATIONS FOR CONTROL OF MULTIFLORA ROSE
This product can be applied when plants are dormant as an undiluted SPOT CONCENTRATE directly to the soil or as a LO-OIL BASAL BARK treatment using an oil-water emulsion solution.

SPOT-CONCENTRATE applications of this product should be applied directly to the soil as close as possible to the root crown but within 6 to 8 inches of the crown. On sloping terrain, application should be made to the uphill side of the crown. Do not make application when snow or water prevents applying this product directly to the soil. The use rate of this product is dependent on the canopy diameter of the multiflora rose. Examples: Use this product at ¼, 1.0, or 2 ¼ fl oz of product respectively, for 5, 10 or 15 feet canopy diameters. Do not exceed a total of 2 qts of this product per acre per year.

LO-OIL BASAL BARK applications of this product should be applied to the basal stem region from the ground line up to a height of 12 to 18 inches. Spray until runoff, with special emphasis on covering the root crown. For best results, make application when plants are dormant. Do not make application after bud break or when plants are showing signs of active growth. Do not make application when snow or water prevents applying this product to the ground line. Refer to MIXING AND APPLICATIONS in this section for method of preparing oil-in-water emulsion. Example for making approximately 2 gallons of a LO-OIL spray solution mixture: combine 1 ½ gals of water plus 1 oz emulsifier plus 1 pt this product plus 2 ½ pts of No. 2 diesel fuel. Adjust amounts of materials used proportionately to the amount of final spray solution desired. Do not exceed 8 gals of final spray solution applied per acre per year.

This product is labeled for use on both newly seeded and established grasses grown in Conservation Reserve or Federal Set-A-Side Programs. Observe all RESTRICTIONS AND PRECAUTIONS and read and follow MIXING, APPLICATION and CLEANING instructions. Treatments with this product will cause injury or may kill alfalfa, clovers, lespedeza, wild winter peas, vetch, and other legumes.

Agriculturally approved surfactants may be added to the spray mixture to improve postemergence weed control, particularly in dry growing conditions.

Do not use adjuvants containing penetrants such as petroleum-based oils after grass emergence on newly seeded grasses.

NEWLY SEEDED AREAS

This product may be applied either preplant or postemergence to newly seeded grasses or small grains such as barley, oats, rye, sudangrass, wheat or other grain species grown as a cover crop. Postemergence applications may be made after seedling grasses exceed the 3 leaf stage. Rates of this product greater than 1 pt per treated acre may severely injury newly seeded grasses. Preplant applications – injury to new seedlings may occur if intervals between application and grass planting is less than 45 days per pint of this product per treated acre west of the Mississippi River or 20 days per pint east of the Mississippi River.

ESTABLISHED GRASS STANDS

Established grass stands are perennial grasses planted one or more seasons prior to treatment. Certain species: bentgrass, carpetgrass, smooth brome, buffalograss or St. Augustine grass may be injured when treated with this product at rates exceeding 1 pt per treated acre.

RESTRICTIONS

— Do not exceed a total of 2 applications of this product per treated acre during a growing season.

WEEDS CONTROLLED

This product, when applied at specified rates, will control many ANNUAL and BIENNIAL weeds and provide control or suppression of many perennial weeds. (Refer to WEED LIST).

RATES AND TIMINGS

Application rates and timing of this product treatment are given below. Use the higher rate of the rate range when vegetation is either dense or tall, or when weeds are growing under stressed conditions such as drought or cool temperature.

Weed Type ¹ & Stage	Broadcast Rate Per Treated Acre	
	Amount of This Product	Equivalent lb ai
Annuals		
Small actively growing	¼ - 1.0	1/8 – ½
Established weed growth	1.0	½
Biennials²		
Rosette diameter		
a) less than 3 inches	½ - 1.0	¼ - ½
b) 3 inches or greater	1.0 – 2.0	½ - 1.0
c) bolting biennial	2.0	1.0
Perennials²		
Suppression/Control	2.0	1.0

¹For best result, treat biennial weeds with this product when they are in the rosette stage of growth.

²Biennial and Perennial weeds will require follow-up (sequential) treatments for seedling control and escapes.

TANK MIX TREATMENTS

To control grasses and additional broadleaf weeds, this product may be tank mixed with other herbicides registered for use in Conservation Reserve Programs such as 2,4-D, glyphosate (Roundup), paraquat (Gramoxone), metsulfuron (Ally) and others. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

ASPARAGUS

Observe all DIRECTIONS, RESTRICTIONS, AND PRECAUTIONS and read and follow MIXING, APPLICATION and CLEANING instructions. If spray contacts emerged spears, crooking (twisting) of some spears may result. If such crooking occurs, discard affected spears.

RESTRICTIONS

— Do not harvest prior to 24 hours after treatment.
— Do not use in the Coachella Valley of California.
— Do not exceed a total of 1 pt of this product per treated acre per crop year.

RATES AND TIMINGS

Apply this product to emerged and actively growing weeds in 40 to 60 gal of diluted spray per treated acre immediately after cutting the field, but at least 24 hours before the next cutting.

Weeds	Rate Per Treated Acre
Mustard, Black Pigweed, Redroot (Carelessweed) Sowthistle, Annual Thistle, Canada ¹ Thistle, Russian	½ - 1.0 pt (1/4 - ½ lb ai)
Bindweed, Field ¹ Chickweed, Common Goosefoot, Nettleleaf Radish, Wild Thistle, Milk	1.0 pt (1/2 lb ai)

¹This product may be applied in a tank mixture with either 2,4-D or Roundup herbicide for improved control of Canada thistle and field bindweed. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

TURF AND LAWNS FOR USE IN FARMSTEAD (NON-CROPLAND) AND SOD FARMS

IMPORTANT

Observe all RESTRICTIONS AND PRECAUTIONS and read and follow MIXING, APPLICATION and CLEANING instructions.

PRECAUTIONS

To avoid injury to newly seeded grasses, application of this product should be delayed until after the second mowing. Furthermore, application rates in excess of 1 pt (1/2 lb ai) per treated acre may cause noticeable stunting or discoloration of sensitive grass species such as bentgrass, carpetgrass, buffalograss, and St. Augustine grass.

In areas where roots of sensitive plants extend, do not apply in excess of ¼ pt (1/8 lb ai) of this product per treated acre on coarse textured (sandy-type) soils, or in excess of ½ pt (1/4 lb ai) per treated acre on fine textured (clay-type) soils. Do not make repeat applications in these areas for 30 days and until previous application of this product have been activated in the soil by rain or irrigation.

RESTRICTIONS

- Do not exceed a total of 2 applications of this product per year.
- Do not exceed a total of 2 pts (1 lb ai) this product per treated acre during the growing season.

WEEDS CONTROLLED

This product, when applied at specified rates, will give control of many ANNUAL, BIENNIAL, and noted (*) PERENNIAL broadleaf weeds commonly found in turf. This product will also give growth suppression of many other listed PERENNIAL broadleaf weeds and WOODY brush and vine species. (Refer to WEED LIST.)

MIXING AND APPLICATION

Apply 30 to 200 gal of diluted spray per treated acre (3 qts - 4 ¼ gals per 1,000 sq ft), depending on density or height of weeds treated and on the type of equipment used.

RATES AND TIMINGS

Use the higher level of listed rate **ranges** when treating dense vegetative growth.

Weed Stage & Type	Amount of This Product		
	Pints per treated acre	lb ai per treated acre	teaspoons per 1,000 sq ft
Annual			
Small, actively growing	½ - 1.0	¼ - ½	1.0 - 2 ¼
Established weed growth	1.0 - 1 ½	½ - ¾	2 ¼ - 3 ¼
Biennial Rosette Diameter			
Less than 3 inches	½ - 1.0	¼ - ½	1.0 - 2 ¼
3 inches or more	1.0 - 2.0	½ - 1.0	2 ¼ - 4 ½
Perennials and Woody			
Brush and Vines	1.0 - 2.0	½ - 1.0	2 ¼ - 4 ½

For best performance, apply when weeds are emerged and actively growing.

TANK MIX TREATMENTS

It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

Tank mix treatments of this product may be made with 2,4-D, MCPA, MCPP, or bromoxynil for control of additional weeds listed on the tank mix product label.

Apply 1/5 - ½ pt (1/10 - ¼ lb ai) of this product per treated acre with the labeled rate of 2,4-D, MCPA, or MCPP, or bromoxynil. Use the higher level of the listed rate ranges when treating established weeds.

GRASS SEED CROPS: GRASSES GROWN FOR SEED SUCH AS BERMUDA GRASS, BLUEGRASS, FESCUE, AND RYEGRASS

IMPORTANT

Observe all RESTRICTIONS AND PRECAUTIONS. Read and follow MIXING, APPLICATION and CLEANING instructions. Refer to the **PASTURE, HAY, RANGELAND, AND GENERAL FARMSTEAD (Non-Cropland)** Section for possible grazing and feeding restrictions.

RESTRICTIONS

- Do not use on bentgrass unless possible crop injury can be tolerated.

WEEDS CONTROLLED

This product will provide control or suppression of annual broadleaf weeds listed below. For improved control of listed weeds plus additional weeds, it is recommended that this product be applied in a tank mix with other herbicides. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

Alfalfa ¹	Clover	Lambsquarters, Common
Bedstraw, Catchweed	Cockle, White	Lettuce, Prickly
Bindweed, Field	Dock, Broadleaf	Mayweed (Dogfennel)
Buttercup, Corn	Dock, Curly	Ragwort, Tansy
Buttercup, Creeping	Hemlock, Poison	Sorrel, Red (Sheep Sorrel)
Buttercup, Western Field	Knapweed, Russian ¹	Sowthistle, Annual
Catchfly, Nightflowering	Knawel	Starwort, Little
Chamomile, Corn	Knotweed, Prostrate	Thistle, Canada ¹
Chickweed, Common	Kochia	
Chickweed, Mouseear	Ladythumb	

¹Top growth only

RATES AND TIMINGS

Apply ½ - 1 pt of this product per treated acre on SEEDLING GRASS after the crop reaches the 3 to 5 leaf stage. Apply up to 2 pts of this product on well-established perennial grass. **DO NOT APPLY AFTER THE GRASS SEED CROP BEGINS TO JOINT.** For best performance, make applications when weeds are in the 2 to 4 leaf stage and rosettes are less than 2 inches across. Use the higher level of listed rate ranges when treating more mature weeds or dense vegetative growth.

TANK MIXTURES

For control of grasses or additional broadleaf weeds, this product may be tank mixed with all broadleaf herbicides registered for use in Grass Seed Production. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

BROADCAST RATE PER TREATED ACRE:

Apply ½ - 2 pts this product with the labeled rates of the following products:

Product	Active Ingredient
2,4-D amine or ester	2,4-D
MCPA amine	MCPA
Buctril®	bromoxynil
Curtail®	clopyralid + 2,4-D
Karmex®	diuron
Stinger®	clopyralid

ANNUAL GRASS CONTROL

For suppression of **ANNUAL GRASS WEEDS** such as:

- Brome, Downy (Cheatgrass)
- Brome, Ripgut
- Fescue, Rattail
- Windgrass

Apply 2 pts of this product per treated acre in the fall or late summer after harvest and burning of established grass seed crops. Applications should be made immediately following the first irrigation when the soil is moist and before weeds have more than 2 leaves.

RESTRICTIONS

Do not exceed a total of 2 applications of this product per year.

PREPLANT DIRECTIONS (POST HARVEST/FALLOW/CROP STUBBLE/SET-A-SIDE) FOR BROADLEAF WEED CONTROL BEFORE WHEAT, CORN, SORGHUM, SOYBEANS

IMPORTANT: Observe all directions, restrictions and precautions. Read and follow mixing and application instructions.

WEEDS CONTROLLED

This product may be applied alone or in tank mix combinations with other herbicides registered for this use. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

This product can be applied either POST HARVEST in the fall, spring, or summer during the FALLOW period or to CROP/STUBBLE/SET-A-SIDE acres. This product, when applied at the specified rates, will control many ANNUAL broadleaf weeds, see the WEEDS CONTROLLED section under small grains. In addition, this product will control or suppress the following BIENNIAL and PERENNIAL broadleaf weeds:

Alfalfa ¹	Horsenettle, Carolina	Thistle, Milk
Artichoke, Jerusalem	Knapweed, Diffuse	Thistle, Musk
Bindweed, Field	Knapweed, Spotted	Thistle, Plumelless
Bindweed, Hedge	Nightshade, Silver	Thistle, Scotch
Blueweed, Texas	Redvine	Trumpetcreeper (Buckvine)
Bursage (Bur Ragweed, Povertyweed, Lakeweed) ¹	Smartweed, Swamp	
Dandelion, Common ¹	Sowthistle, Perennial ¹	
Dock, Curly ¹	Spurge, Leafy	
Dogbone, Hemp	Thistle, Bull	
Garlic, Wild ²	Thistle, Canada ²	

¹These perennials may be controlled using this product at rates lower than those labeled for other listed perennial weeds. (See RATES AND TIMINGS under this heading).

²See the SPECIAL TANK MIX TREATMENTS section under this heading for specific control programs for these weeds.

RATES AND TIMINGS

Apply this product as a broadcast or spot treatment to emerged and actively growing weeds after crop harvest (post-harvest) and before a killing frost or in the fallow cropland or crop stubble the following spring or summer. Agriculturally approved spray additives, such as surfactants or oils, may be used to enhance spray coverage and the herbicide's penetration of weed foliage. See CROPPING RESTRICTIONS for specified interval between application and planting to prevent crop injury.

For best performance, make application when ANNUAL weeds are less than 6 inches tall, when BIENNIAL weeds are in the rosette stage and to PERENNIAL weed regrowth in late summer or fall following a mowing or tillage treatment. Most effective control of upright PERENNIAL broadleaf weeds, such as Canada thistle and Jerusalem artichoke, occurs if application is made when the majority of weeds, such as field bindweed and hedge bindweed, are in or beyond the full bloom stage.

Avoid disturbing treated areas following application. Treatments may not kill weeds which develop from seed or underground plant parts, such as rhizomes or bulblets, after the effective period for this product. For seedling control, a follow-up program or other cultural practices could be instituted. For small grain in-crop uses of this product, see the **RATES AND TIMINGS** section under the **SMALL GRAINS** heading for details.

T-REX DICAMBA HERBICIDE RATES PER TREATED ACRE

Weed Type	Amount of Product Per Treated Acre
Annual	½ - 1.0 pt
Biennial	1.0 – 2.0 pts
Perennial Suppression Control – labeled perennials	1.0 – 2.0 pts (16.0 – 32.0 fl oz) 2.0 pts (32.0 fl oz)

TANK MIX TREATMENTS

This product may be tank mixed with one or more of, but not limited to, the following herbicides for control of grasses or additional broadleaf weeds. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

T-REX DICAMBA HERBICIDE BROADCAST RATE PER TREATED ACRE FOR ANNUAL WEED CONTROL:

Apply ¼ - 1 pt this product with the labeled rate of the following products:

Product	Active Ingredient
Aatrex® 4L	atrazine
Aatrex® Nine-O®	atrazine
Ally®	metasulfuron-methyl
Amber®	triasulfuron
Fallow Master	Glyphosate + dicamba
Gramoxone® Extra	paraquat
Kerb®	pronamide
Landmaster® BW	glyphosate + 2,4-D
Roundup	glyphosate
Sencor® DF	metribuzin
Sencor® 4	metribuzin
2,4-D	2,4-D

T-REX DICAMBA HERBICIDE BROADCAST RATE PER TREATED ACRE FOR BIENNIAL AND PERENNIAL WEED CONTROL:

Apply 1 – 2 pt of this product with the labeled rate of the following products:

Product	Active Ingredient
Curtail®	clopyralid + 2,4-D
2,4-D	2,4-D
Landmaster® BW	glyphosate + 2,4-D
Roundup®	glyphosate
Tordon® 22K	picloram

SPECIAL TANK MIX TREATMENTS

For suppression of PERENNIAL weeds, apply ½ - 1 pt of this product with the labeled rate of Roundup Herbicide or Roundup TR per treated acre. For wild garlic control, apply 1 pt of this product with the labeled rate of 2,4-D LV ester per treated acre. Apply when wild garlic is 4 to 8 inches tall.

For Canada thistle control, use this product, this product plus Curtail, or this product plus Roundup herbicide tank mix treatments.

Application may be made during fallow periods for control of volunteer barley, bulbous bluegrass, downy brome, jointed goatgrass, common rye, and volunteer wheat when they are actively growing. Use 1 pt of this product with the labeled rate of Kerb 50-W. Fall seeded wheat must be planted 9 months or more after application. For best performance, make application between mid-October and mid-December, prior to soil freeze up.

During fallow periods, apply this product plus Landmaster BW or Fallow Master Herbicide to give improved control of kochia, wild buckwheat, prickly lettuce, field bindweed, and Canada thistle. Use 1/8 – ¼ pt of this product plus the labeled rate of Landmaster BW or Fallow Master Herbicide for annual weed control or ¼ - ½ pt of this product plus the labeled rate of Landmaster BW or Fallow Master Herbicide for perennial weed suppression.

CROPPING DIRECTIONS

The following directions are based on use rates of this product up to 2 pts per treated acre. CORN, SORGHUM, and SOYBEANS may be planted in the spring following applications made during the previous year. If less than 1 inch of rainfall occurs between application and the first killing frost, treated areas should be cultivated to allow herbicide to come in contact with moist soil. Cultivation may take place before or immediately after ground thaw.

Soybean injury may occur if the interval between application and planting is less than specified. In areas with greater than 30 inches of rainfall, delay planting for 30 days per pint of this product per treated acre. In areas with less than 30 inches of rainfall, delay planting for 45 days per pint of this product per treated acre. Exclude days when ground is frozen.

WHEAT may be planted in the fall or spring following applications. Also, spot applications may be made any time prior to crop emergence if crop injury can be tolerated in treated areas. Wheat injury may occur if the interval between application and planting is less than specified.

East of the Mississippi River, the interval is 20 days per pt of this product per treated acre or 1.25 days per 1 fl oz. Moisture is essential for this products' degradation. Exclude days when ground is frozen.

West of the Mississippi River, the interval is 45 days per pt of this product per treated acre or 3 days per oz. Moisture is essential for this products' degradation. Exclude days when ground is frozen.

Following a normal harvest of barley, oats, or wheat, any rotational crop may be planted. If the interval before harvest is shortened, such as when cover crops will be plowed under, do not follow up with the planting of a sensitive crop.

**CONTROL OF PERENNIAL BROADLEAF WEEDS
IN CROPLAND
(SPOT APPLICATION ONLY)
FOR USE ONLY IN THE STATES OF IDAHO,
MONTANA, NEVADA, OREGON, UTAH,
AND WASHINGTON**

IMPORTANT: Observe all RESTRICTIONS AND PRECAUTIONS read and follow MIXING, APPLICATION and CLEANING instructions.

RESTRICTIONS

- Do not treat sub-irrigated cropland or areas where the soil remains saturated with water throughout the year.
- Make only one application of this product per year.
- Do not use this product unless injury to wheat or rotated barley will be acceptable.
- For Spot Applications, do not apply to an area greater than 1,000 ft sq per acre.

WEEDS CONTROLLED

This product, when applied at specified rates, will control many broadleaf weeds including:

Bindweed, Field	Dock, Broadleaf (Bitterdock)	Dock, Curly	Knapweed, Black	Knapweed, Russian
Ragwort, Tansy	Spurge, Leafy	Thistle, Canada		

RATES AND TIMINGS

This product may be applied at any time following a crop harvest to stubble fallow or other cropland. Application should be made when weeds are actively growing and prior to a killing frost.

Apply 1 qt (1 lb ai) of this product per treated acre. Application may be made up to one month prior to the planting of wheat.

Barley, oats, corn, sorghum [milo], annual or perennial grass crops may be planted into treated areas one year after application. Crops grown for seed (other than perennial grass seed) should not be planted into treated areas until three years after application. Do not plant broadleaf crops such as alfalfa, beans, peas, potatoes, or sugarbeets into treated areas until two years after application.

In most cases, treatments will not kill perennial weed seedlings which germinate from seed one or two years after treatment. Once the effect of the chemical has been lost, a follow-up program for seedling control or other cultural practices should be instituted.

WIPER APPLICATION USES

IMPORTANT: Observe all RESTRICTIONS AND PRECAUTIONS and read and follow MIXING, APPLICATION and CLEANING instructions.

This product may be applied through wiper application equipment to control or suppress actively growing broadleaf weeds, brush and vines. Use a solution containing 1 part of this product to 1 part water. Do not contact desirable vegetation with herbicide solution. Wiper application should only be made to crops (including pastures) and non-cropland areas described in this label with the exception of grain sorghum (milo).

LIMIT OF WARRANTY AND LIABILITY

To the extent consistent with applicable law, MEY Corporation warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes set forth in the Complete Directions for Use label booklet ("Directions") when used in accordance with those Directions under the conditions described therein. NO OTHER EXPRESSED WARRANTY OR IMPLIED WARRANTY OF FITNESS FOR PARTICULAR PURPOSE OR MERCHANTABILITY IS MADE. This warranty is also subject to the conditions and limitations stated herein.

To the extent consistent with applicable law, buyer and all users shall promptly notify this Company of any claims whether based in contract, negligence, strict liability, other tort or otherwise.

To the extent consistent with applicable law, buyer and all users are responsible for all loss or damage from use or handling which results from conditions beyond the control of this Company, including, but not limited to, incompatibility with products other than those set forth in the Directions, application to or contact with desirable vegetation, unusual weather, weather conditions which are outside the range considered normal at the application site and for the time period when the product is applied, as well as weather conditions which are outside the application ranges set forth in the Directions, application in any manner not explicitly set forth in the Directions, moisture conditions outside the moisture range specified in the Directions, or the presence of products other than those set forth in the Directions in or on the soil, crop, or treated vegetation.

To the extent consistent with applicable law, Company does not warrant any product reformulated or repackaged from this product except in accordance with this Company's stewardship requirements and with express written permission from this Company.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE LIMIT OF THE LIABILITY OF THIS COMPANY OR ANY OTHER SELLER FOR ANY AND ALL LOSSES, INJURIES OR DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT (INCLUDING CLAIMS BASED IN CONTRACT, NEGLIGENCE, STRICT LIABILITY, OTHER TORT OR OTHERWISE) SHALL BE THE PURCHASE PRICE PAID BY THE USER OR BUYER FOR THE QUANTITY OF THIS PRODUCT INVOLVED, OR, AT THE ELECTION OF THIS COMPANY OR ANY OTHER SELLER, THE REPLACEMENT OF SUCH QUANTITY, OR, IF NOT ACQUIRED BY PURCHASE, REPLACEMENT OF SUCH QUANTITY. IN NO EVENT SHALL THIS COMPANY OR ANY OTHER SELLER BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES.

Upon opening and using this product, buyer and all users are deemed to have accepted the terms of this LIMIT OF WARRANTY AND LIABILITY which may not be varied by any verbal or written agreement. If terms are not acceptable, return at once unopened.
